Fight Climate Change by Going Vegan

Climate change has been called humankind's greatest challenge and the world's gravest environmental threat. According to the United Nations (U.N.) report *Climate Change 2014: Impacts, Adaptation, and Vulnerability*, climate change is having an impact on every continent, affecting agriculture, human health, ecosystems, water supplies, and even people's livelihoods. Many conscientious people are trying to help combat climate change by driving more fuel-efficient cars and using energy-saving light bulbs, but these measures simply aren't enough.

If you're serious about protecting the environment, the most important thing that you can do is **stop eating meat, eggs, and dairy** "products".
